

## UTILIZATION MANAGEMENT MEDICAL POLICY

**POLICY:** Oncology (Injectable – CAR-T) – Carvykti Utilization Management Medical Policy

- Carvykti<sup>®</sup> (ciltacabtagene autoleucel intravenous infusion – Janssen Biotech)

**REVIEW DATE:** 03/20/2024; selected revision 05/29/2024

---

### OVERVIEW

Carvykti, a B-cell maturation antigen (BCMA)-directed genetically modified autologous T-cell immunotherapy, is indicated for the treatment of relapsed or refractory **multiple myeloma** in adults after at least one prior line of therapy, including a proteasome inhibitor and an immunomodulatory agent, and are refractory to lenalidomide.<sup>1</sup>

### Dosing Information

Carvykti is supplied in one infusion bag containing a frozen suspension of genetically modified autologous T-cells in 5% dimethyl sulfoxide.<sup>1</sup> The bag is stored in the vapor phase of liquid nitrogen (-184°F). The recommended dose is a single infusion of 0.5 to 1.0 x 10<sup>6</sup> chimeric antigen receptor (CAR)-T cells per kg of body weight, to a maximum dose of 1 x 10<sup>8</sup> CAR-T cells.

### Guidelines

The National Comprehensive Cancer Network clinical practice guidelines for multiple myeloma (version 4.2024 – April 26, 2024) recommend Carvykti as a “Preferred Regimen” for the treatment of multiple myeloma in patients who have received at least one prior therapy including a proteasome inhibitor and an immunomodulatory agent, and are refractory to lenalidomide.<sup>2,3</sup> Carvykti is also recommended as a “Preferred Regimen” for the treatment of multiple myeloma in patients who have received four or more previous therapies including a proteasome inhibitor, an immunomodulatory agent, and an anti-CD38 monoclonal antibody before receiving Carvykti.

### Safety

Carvykti has a Boxed Warning for cytokine release syndrome, immune effector cell-associated neurotoxicity syndrome, parkinsonism and Guillain-Barre syndrome, hemophagocytic lymphohistiocytosis/macrophage activation syndrome, prolonged and/or recurrent cytopenias, and secondary hematological malignancies.<sup>1</sup> Carvykti is only available through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) called the Carvykti REMS.

### POLICY STATEMENT

Prior Authorization is recommended for medical benefit coverage of Carvykti. Approval is recommended for those who meet the **Criteria** and **Dosing** for the listed indication. Because of the specialized skills required for evaluation and diagnosis of patients treated with Carvykti as well as the monitoring required for adverse events and long-term efficacy, approval requires Carvykti to be prescribed by or in consultation with a physician who specializes in the condition being treated. The approval duration is 6 months to allow for an adequate time frame to prepare and administer 1 dose of therapy.

**Automation:** None.

### RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Carvykti is recommended in those who meet the following criteria:

### **FDA-Approved Indication**

- 
- 1. Multiple Myeloma.** Approve a single dose if the patient meets ALL of the following (A, B, C, D, and E):
- A)** Patient is  $\geq 18$  years of age; AND
  - B)** Patient meets ONE of the following (i or ii):
    - i.** Patient has received four or more lines of systemic therapy, including one therapy from each of the following (a, b, and c):
      - a)** Immunomodulatory agent; AND  
Note: Immunomodulatory agents include Thalomid (thalidomide capsules), lenalidomide capsules, and Pomalyst (pomalidomide capsules).
      - b)** Proteasome inhibitor; AND  
Note: Proteasome inhibitors include bortezomib injection, Kyprolis (carfilzomib intravenous infusion), and Ninlaro (ixazomib capsules).
      - c)** Anti-CD38 monoclonal antibody; OR  
Note: Anti-CD38 monoclonal antibodies include Darzalex (daratumumab intravenous infusion), Darzalex Faspro (daratumumab and hyaluronidase-fihj subcutaneous injection), and Sarclisa (isatuximab-irfc intravenous infusion).
    - ii.** Patient meets BOTH of the following (a and b):
      - a)** Patient has received one or more lines of systemic therapy, including one therapy from BOTH of the following [(1) and (2)]:
        - (1)** Immunomodulatory agent; AND  
Note: Immunomodulatory agents include Thalomid (thalidomide capsules), lenalidomide capsules, and Pomalyst (pomalidomide capsules).
        - (2)** Proteasome inhibitor; AND  
Note: Proteasome inhibitors include bortezomib injection, Kyprolis (carfilzomib intravenous infusion), and Ninlaro (ixazomib capsules).
      - b)** Patient is refractory to lenalidomide; AND
  - C)** Patient has received or plans to receive lymphodepleting chemotherapy prior to infusion of Carvykti; AND
  - D)** Patient has not been previously treated with chimeric antigen receptor (CAR-T) therapy; AND  
Note: Examples of CAR-T therapy includes Carvykti, Abecma (idecabtagene vicleucel intravenous infusion), Breyanzi (lisocabtagene maraleucel intravenous infusion), Kymriah (tisagenlecleucel intravenous infusion), Tecartus (brexucabtagene intravenous infusion), and Yescarta (axicabtagene intravenous infusion).
  - E)** The medication is prescribed by or in consultation with an oncologist.

**Dosing.** Approve up to  $1 \times 10^8$  CAR-T cells administered intravenous as a single dose.

---

### **CONDITIONS NOT RECOMMENDED FOR APPROVAL**

Coverage of Carvykti is not recommended in the following situations:

- 1.** Coverage is not recommended for circumstances not listed in the Recommended Authorization Criteria. Criteria will be updated as new published data are available.
