

PRIOR AUTHORIZATION POLICY

POLICY: Oncology – Pemazyre Prior Authorization Policy

• Pemazyre® (pemigatinib tablets – Incyte)

REVIEW DATE: 05/04/2022; selected revision 06/22/2022 and 09/14/2022

OVERVIEW

Pemazyre, a kinase inhibitor, is indicated in adults for the following uses:¹

- Previously treated, unresectable locally advanced or metastatic **cholangiocarcinoma** with a fibroblast growth factor receptor 2 (*FGFR2*) fusion or other rearrangement as detected by an FDA-approved test.
- Relapsed or refractory **myeloid/lymphoid neoplasms** with fibroblast growth factor receptor 1 (*FGFR1*) rearrangement.

Guidelines

Pemazyre is addressed in National Comprehensive Cancer Network (NCCN) guidelines:²

- **Hepatobiliary cancers**: NCCN guidelines (version 1.2022 March 29, 2022) recommend Pemazyre for disease progression on or following systemic treatment for patients with unresectable or metastatic cholangiocarcinoma with *FGFR2* fusion or rearrangement, as a single agent (category 2A).³
- Myeloid/Lymphoid Neoplasms with Eosinophilia and Tyrosine Kinase Fusion Genes: NCCN guidelines (version 1.2022 April 14, 2022) recommend Pemazyre for the treatment of myeloid/lymphoid neoplasms with eosinophilia and FGFR1 rearrangement in chronic phase or blast phase (category 2A).⁴ Treatment in a clinical trial is preferred, if available, rather than off-label use.

POLICY STATEMENT

Prior Authorization is recommended for prescription benefit coverage of Pemazyre. All approvals are provided for the duration noted below.

Automation: None.

RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Pemazyre is recommended in those who meet one of the following criteria:

FDA-Approved Indications

- 1. Cholangiocarcinoma. Approve for 1 year if the patient meets ALL of the following criteria (A, B, C, and D):
 - A) Patient is ≥ 18 years of age; AND
 - **B)** Patient has unresectable locally advanced or metastatic disease; AND
 - C) Tumor has fibroblast growth factor receptor 2 (*FGFR2*) fusion or other rearrangement, as detected by an approved test; AND
 - **D)** Patient has been previously treated with at least one systemic regimen.

<u>Note</u>: Examples of systemic regimens are gemcitabine + cisplatin, 5-fluorouracil + oxaliplatin or cisplatin, capecitabine + cisplatin or oxaliplatin, gemcitabine + Abraxane (albumin-bound paclitaxel) or capecitabine or oxaliplatin, gemcitabine + Abraxane + cisplatin, FOLFOX (5-fluorouracil, leucovorin, and oxaliplatin), FOLFIRI (5-fluorouracil, leucovorin, irinotecan), Stivarga (regorafenib tablets).

- 2. **Myeloid/Lymphoid Neoplasms.** Approve for 1 year if the patient meets ALL of the following criteria (A, B, C, and D):
 - A) Patient is ≥ 18 years of age; AND
 - **B)** Patient has eosinophilia; AND
 - C) The cancer has fibroblast growth factor receptor 1 (FGFR1) rearrangement, as detected by an approved test; AND
 - **D)** The cancer is in chronic phase or blast phase.

CONDITIONS NOT RECOMMENDED FOR APPROVAL

Coverage of Pemazyre is not recommended in the following situations:

1. Coverage is not recommended for circumstances not listed in the Recommended Authorization Criteria. Criteria will be updated as new published data are available.

HISTORY

Type of Revision	Summary of Changes	Review Date
Annual Revision	No criteria changes.	04/28/2021
	Revised the Note regarding examples of systemic regimens: Added FOLFIRI (5-	
	fluorouracil, leucovorin, irinotecan), Stivarga (regorafenib tablets).	
Annual Revision	Cholangiocarcinoma. Added requirement that the patient is ≥ 18 years of age.	05/04/2022
	Myeloid/Lymphoid Neoplasms. Added new condition of approval.	
Selected Revision	Cholangiocarcinoma. Changed approval duration from 3 years to 1 year.	06/22/2022
	Myeloid/Lymphoid Neoplasms. Changed approval duration from 3 years to 1 year.	
Selected Revision	Myeloid/Lymphoid Neoplasms: Moved indication to FDA-Approved Indications.	09/14/2022
