

PRIOR AUTHORIZATION POLICY

POLICY: Oncology – Krazati Prior Authorization Policy

- Krazati™ (adagrasib tablets – Mirati Therapeutics)

REVIEW DATE: 12/20/2023

OVERVIEW

Krazati, a Kirsten RAt Sarcoma virus (KRAS) inhibitor, is indicated for the following uses¹:

- **Non-small cell lung cancer (NSCLC):** Treatment of *KRAS G12C*-mutated locally advanced or metastatic disease, as determined by an FDA-approved test, in adults who have received at least one prior systemic therapy.
- **Colorectal cancer:** Krazati in combination with Erbitux® (cetuximab intravenous infusion) is indicated for the treatment of *KRAS G12C*-mutated locally advanced or metastatic disease, as determined by an FDA-approved test, in adults who have received prior treatment with fluoropyrimidine-, oxaliplatin-, and irinotecan-based chemotherapy.

Both the NSCLC and colorectal cancer indications were approved under accelerated approval based on objective response rate and duration of response. Continued approval for these indications may be contingent upon verification and description of a clinical benefit in confirmatory trials.

Mutations in the *KRAS* gene most commonly occur at codon 12.² Data suggest that approximately 30% of patients with NSCLC have *KRAS* mutations. The prognosis of survival of patients with tumors with *KRAS* mutation is poorer compared with that of patients with tumors without *KRAS* mutation.

Guidelines

The National Comprehensive Cancer Network (NCCN) guidelines recommend Krazati for the following cancer types:

- **Non-Small Cell Lung Cancer:** Guidelines (version 5.2023 – November 8, 2023) recommend Krazati as a subsequent treatment option, for use after at least one prior systemic treatment (i.e., second-line and beyond) if the patient has not received previous *KRAS G12C*-targeted therapy (category 2A). Patients who progressed on Lumakras™ (sotorasib tablets), another *KRAS* inhibitor directed at *KRAS G12C*-mutated NSCLC, should not be treated with Krazati; and vice-versa. The NCCN Central Nervous System Cancers guidelines (version 1.2023 – March 24, 2023) recommend use of Krazati for *KRAS G12C* mutation-positive NSCLC that has metastasized to the brain (category 2A).³
 - **Colon and Rectal Cancer:** Guidelines for colon cancer (version 4.2024 – July 3, 2024) and rectal cancer (version 3.2024 – July 3, 2024) recommend Krazati for some situations in patients with *KRAS G12C*-mutated disease.^{4,5} For initial treatment in combination with Erbitux or Vectibix® (panitumumab intravenous infusion) or as monotherapy if patient is unable to tolerate Erbitux or Vectibix due to toxicity (category 2A). Krazati is also recommended as subsequent therapy (category 2A) after previous therapy with oxaliplatin, irinotecan, FOLFOX (5-FU, leucovorin, and oxaliplatin) or CapeOX (capecitabine and oxaliplatin).
-

POLICY STATEMENT

Prior Authorization is recommended for prescription benefit coverage of Krazati. All approvals are provided for the duration noted below.

Automation: None.

RECOMMENDED AUTHORIZATION CRITERIA

Coverage of Krazati is recommended in those who meet the following criteria:

FDA-Approved Indication

1. **Non-Small Cell Lung Cancer (NSCLC).** Approve for 1 year if the patient meets the following (A, B, and C):

A) Patient is ≥ 18 years of age; AND

B) Patient has *KRAS G12C*-mutated locally advanced or metastatic NSCLC, as determined by an approved test; AND

C) Patient has been previously treated with at least one systemic regimen.

Note: Examples of systemic regimens include those containing one or more of the following products: Keytruda (pembrolizumab intravenous infusion), Opdivo (nivolumab intravenous infusion), Tecentriq (atezolizumab intravenous infusion), Alimta (pemetrexed intravenous infusion), Yervoy (ipilimumab intravenous infusion), Abraxane (albumin-bound paclitaxel intravenous infusion), bevacizumab, cisplatin, carboplatin, docetaxel, gemcitabine, paclitaxel, vinorelbine.

2. **Colon or Rectal Cancer.** Approve for 1 year if the patient meets the following (A, B, C, D, and E):

A) Patient is ≥ 18 years of age; AND

B) Patient has unresectable, advanced, or metastatic disease; AND

C) Patient has *KRAS G12C* mutation-positive disease; AND

D) Patient meets one of the following (i or ii):

i. The medication is prescribed as part of a combination regimen for colon or rectal cancer; OR

Note: Examples of combination regimens included Krazati + Erbitux (cetuximab intravenous infusion), Krazati + Vectibix (panitumumab intravenous infusion).

ii. As per the prescriber, the patient is unable to tolerate combination therapy; AND

E) Patient has previously received a chemotherapy regimen for colon or rectal cancer.

Note: Examples of chemotherapy regimens include a fluoropyrimidine such as 5-fluorouracil (5-FU), capecitabine; oxaliplatin, irinotecan, or an adjunctive chemotherapy regimen such as FOLFOX (5-FU, leucovorin, and oxaliplatin) or CapeOX (capecitabine and oxaliplatin).

CONDITIONS NOT RECOMMENDED FOR APPROVAL

Coverage of Krazati is not recommended in the following situations:

1. Coverage is not recommended for circumstances not listed in the Recommended Authorization Criteria. Criteria will be updated as new published data are available.
